

# Sentineox

MORE HEALTH,  
LESS OXIDATIVE  
STRESS

Lorem ipsum dolor sit amet

## • About Sentineox

Sentineox is a soluble antioxidant formulation extracted from carob pods and standardized for Gallic acid content. It is designed to fight against the unwanted consequences of oxidative stress.

Tissue damage by oxidative stress is the final stage of multiple disorders, including aging, chronic metabolic disorders, toxic insults and neurodegeneration. Bioavailability and standardization of natural antioxidants hampers the effectiveness of this type of products. Advenion has obtained an standardizable soluble extract of antioxidants, normalized for fixed concentration of gallic acid, one of the most powerful antioxidants known. The extract is obtained using a water-based extraction procedure that respect the environment while assuring stability of the composition. Gallic acid from Sentineox has been proved to be absorbed and distributed to the main organs of the body where it reduces the negative impact of free radicals.

## • Less Oxidative damage, better health

# Shielding against the nocive action of free radicals

## • PStudy/Research

Free radicals derived from oxidative metabolism of nutrient and chemicals are one of the final effectors for the deleterious consequences of aging, chronic inflammatory and metabolic disorders, neurodegenerative diseases and toxicity derived from the consumption of toxics. Sentineox shows a clear efficacy against the hepatocyte damage induced by liver toxics, or by the derangement of cognitive function associated with oxidative stress in normal aging or neurodegeneration associated with inherited disorders such as those found in Down's syndrome or Fragile-X syndrome (Patent pending).
